

Civil Service Fast Stream: Annual Report 2017 and 2018

Foreword: Sir Mark Sedwill

The Civil Service is a unique organisation, offering an almost unrivalled range of career opportunities.

One of the things that makes us unique is how we combine our collective skills and experience with our core values and sense of duty to make a real and positive difference to the lives of citizens.

The extent of that impact depends on teamwork and how we can bring a diversity of life experiences to bear on the issues that affect the people we serve. This means we need leaders who represent all of our communities; leaders who understand the needs of citizens and can build diverse, inclusive teams.

Our Fast Stream graduate development programme and Fast Track apprenticeships epitomise our ambition to be a champion of social mobility and support the aspirations of talented people, whoever they are.

We were among the first employers to open our flagship development programme to external scrutiny and publish the results. Responding to the 2016 report by the Bridge Group into socio-economic diversity in the Fast Stream, we have been able to demonstrate our determination to ensuring that the programme offers an inclusive route to leadership, whatever an individual's background.

This annual report reflects the impact of the actions we have taken. The Fast Stream has seen a sharp increase in the number of applicants from lower socio-economic backgrounds. At the same time, candidates from ethnic minorities were more likely to apply for the Fast Stream in 2018 than in any previous year. Applications for our Early Diversity Internships have increased tenfold since 2016, and more than doubled for our Summer Diversity programme over the same period.

These developments have been recognised externally for how they support social mobility and diversity. In 2017, for example, the Fast Stream was Highly Commended in the UK Social Mobility Awards for Organisation of the Year, and was the highest-ranked public sector agency in the Social Mobility Employer Index.

On a broader measure, the Fast Stream held its position at No. 2 in The Times Top 100 Graduate Employers in 2018, and remained the Public Sector Graduate Employer of Choice.

This recognition reflects our commitment to making the Civil Service the UK's most inclusive employer by 2020, and the importance of the Fast Stream to achieving that ambition. It also shows that we listened to voices like that of the Bridge Group and, for example, significantly increased our outreach work in universities with the most diverse student populations.

Foreword: Sir Mark Sedwill

We are rightly held to the highest standards in meeting the expectations of an increasingly diverse society. In May 2018, we were publicly held to account for our historic difficulty in recruiting people to the Fast Stream from black Caribbean backgrounds. We continue to attract candidates from minority ethnic communities, but the numbers joining our schemes are not as high as they should be. There will be no let-up in our work to increase diversity in the Fast Stream.

In July this year, we created the Diverse Leadership Task Force, which has agreed actions for 2018/19 and beyond. These include further expansion of diversity internships, and developing greater diversity among Fast Stream assessors. Our important collaboration with specialist partners in the private and third sectors, to help us recruit people from all backgrounds, will also continue.

These and other actions will help us to attract and develop the leaders of the future from every community in the UK, so that we can deliver better outcomes for all our citizens and merit the trust of the communities we serve.

Sir Mark Sedwill

Cabinet Secretary and Head of the Civil Service

Our Role

To play our part in delivering a brilliant Civil Service by attracting talented people of all backgrounds to lead the future Civil Service. Our programmes will reflect modern Britain in respect of race, gender, sexuality, disability and socio-economic background.

An overview of our schemes

The Schools and Colleges Outreach Programmes include our Discovery Events programme for 13 to 14 year olds, our Schools Mentoring Programme, and our Work Experience Programme.

These are targeted to young people aged 15 to 18 from a lower socio-economic background (lower SEB).

Our Fast Track Apprenticeship is a two-year Level 4 apprenticeship that is a rewarding alternative to university with a competitive starting salary.

The Fast Stream is the government's flagship graduate programme to support and accelerate the development of talented people to become future leaders of the Civil Service.

As a precursor to our Fast Stream scheme, we also run two internships: the Early Diversity Internship programme (EDIP) and Summer Diversity Internship programme. These are intended to give a taste of life in the Civil Service as well as preparing future applicants for the Fast Stream scheme to give them the best chance of succeeding.

Our performance story

The Civil Service works in areas that make a difference in people's everyday lives in the UK.

To be capable of serving modern Britain, the Civil Service must be more like modern Britain. Fast Stream and Early Talent is determined to show leadership in ensuring equality of opportunity for all.

At the end of 2015, Fast Stream and Early Talent asked for the Bridge Group report to help deliver our ambition to provide a diverse talent pipeline for the Senior Civil Service. This was the first of its kind published by any employer in the country. It showed there was more to do to make sure we matched our public statements with pragmatic approaches to change.

The research provided a springboard for an ambitious programme of work. We developed an action plan where we:

- created a completely new attraction website so candidates know exactly what to expect;
- increased our engagement with targeted academic departments to reach a diverse student body;
- engaged current Fast Streamers to advocate and communicate the value and openness of the Fast Stream and what the job involves;
- removed verbal and numerical online assessment, assessing cognitive ability at a later stage;

- invested in a new purpose-built assessment centre in Newcastle-upon-Tyne; and
- introduced Fast Pass to allow successful summer diversity interns to progress straight to the Fast Stream assessment centre.

This activity delivered much-improved results across a number of diversity categories.

External recognition

The Fast Stream received external acknowledgement and a number of awards for the work we do.

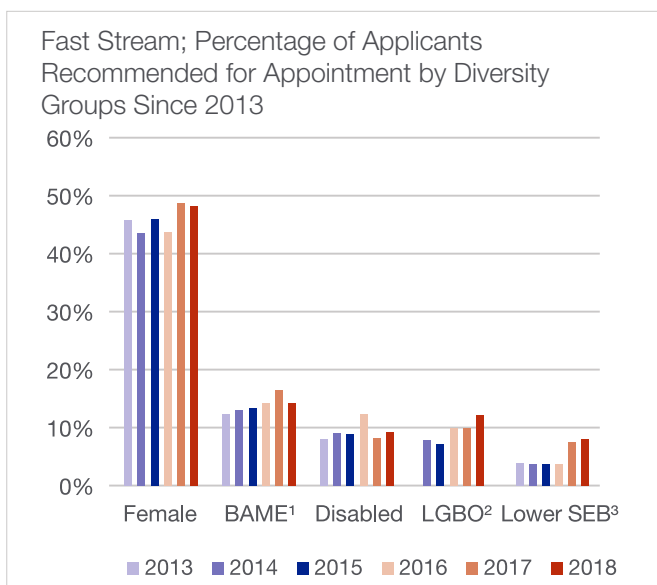

In 2017 we jumped from fourth to second place in the Times Top 100 Graduate Employers. This is based on independent research undertaken with undergraduates on campus. The 2017 UK Social Mobility Index (overseen by the Social Mobility Commission and Social Mobility Foundation) recognised us as the top public sector agency.

We also won many awards for our work around social mobility including:

- TargetJobs National Graduate Recruitment Awards 2018 – Best Diversity Strategy;
- FIRM Awards 2018 – Best Diversity & Inclusion Recruitment Strategy;
- National Undergraduate Employability Awards 2018 – Best Diversity Initiative in Work Experience; and
- Fast Stream was 'Highly Commended' in the 2017 UK Social Mobility Awards for Organisation of the Year.

Our performance story

Our headline figures at a glance

Note: all figures and percentages in the charts and the summary exclude In-Service Fast Stream Competition. For diversity analysis, percentages are based on those candidates where the relevant diversity characteristic is known.

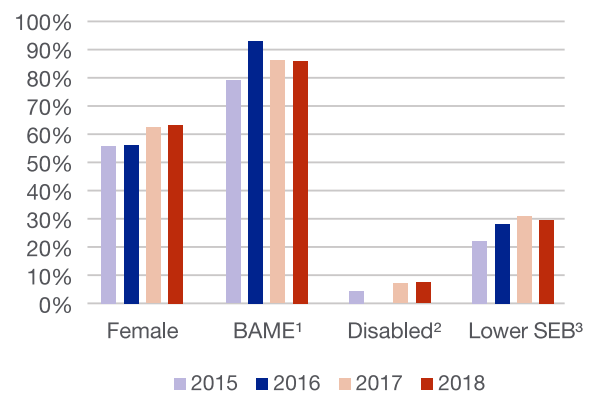

BAME abbreviation for black, Asian and minority ethnic; LGBO abbreviation for Lesbian, Gay, Bisexual and Other (data not available in 2013); SEB abbreviation for socio-economic background. Disability figure not included in 2016 report.

Our performance story

Summer Diversity Internship Programme; Percentage of Applications by Diversity Groups Since 2015

Early Diversity Internship Programme; Percentage of Applications by Diversity Groups Since 2015

Fast Track; Percentage of Applications by Diversity Groups Since 2015

Total applications and appointments since 2007

At 40,570 the number of applications to the Fast Stream reached its highest ever total in 2017, equating to a 92% increase on 2015. The greater strategic marketing focus we first described in our 2016 annual report and developed as described below drove this sharp increase. And our continued marketing actions helped maintain application levels in 2018.

In addition, we have seen a steady increase in the number of applicants recommended for appointment. The number of applicants recommended for appointment has followed a general upward trend since 2011, reaching a high of 1,411 in 2018.

Note: all figures and percentages in the charts and the summary exclude In-Service Fast Stream Competition. For diversity analysis, percentages are based on those candidates where the relevant diversity characteristic is known.

BAME abbreviation for black, Asian and minority ethnic; LGBO abbreviation for Lesbian, Gay, Bisexual and Other (data not available in 2013); SEB abbreviation for socio-economic background. Disability figure not included in 2016 report.

Our performance story

Fast Stream applications by diversity group since 2013

Specifically referring to the Bridge Group report's recommendations on diversity we have made encouraging steps. We have seen a positive trend in the number of applicants across nearly all diversity groups.

Minority ethnic candidates were more likely to apply for the Fast Stream in 2018 than in any previous year. In 2018, 31.2% of applicants were minority ethnic (referenced as BAME in the charts above), representing an increase of more than 10 percentage points since 2015.

More than half of our applicants are female. Gender representation in senior positions is more important now than ever and we are proud that women feel the Civil Service is somewhere they can progress to that level.

Applicants who identify as Lesbian, Gay, Bisexual, Other (LGBO) have increased year on year since 2016. The proportion of applicants who identify as LGBO has increased from 6.3% of all applicants in 2014 to 9.3% of all applicants in 2018.

We have seen a sharp increase in the number of applicants from lower socio-economic backgrounds (SEB). There were around 5,100 lower SEB applicants in 2018, representing a 241% increase in the number that applied in 2015. This compares to an overall increase in applicants of 91%. Lower SEB applicants represented 16.3% of the total number of applicants this year. This is up from 7.9% in 2015.

Fast Stream applicants recommended for appointment by diversity group since 2013

Despite the large increase in the number of applicants generally, we have managed to maintain consistency in the percentages of applicants recommended for appointment. We have seen the proportion of female applicants recommended for appointment rise to a high of 53.8% in 2017 from 47.9% a year earlier with this level remaining at just below 53% in 2018. This improvement is mirrored for LGBO applicants; we reached our highest percentage in 2018 at 13.3%.

Minority ethnic candidates recommended for appointment reached a peak in 2017 at 18.3%. In 2018 it was disappointing in the sense that this figure dropped to 15.8% which is similar to the level in 2016. The proportion of disabled candidates recommended for appointment has remained reasonably constant throughout this period, with a spike in 2016 where 13.2% of those recommended for appointment were disabled. This figure was back at 9.9%, more typical for the period, in 2018. We aspire to a higher proportion of disabled candidates recommended for appointment so this is something that can't be ignored.

We are working on our assessment processes to identify what measures can be put in place to ensure minority ethnic and disabled candidates are provided with every opportunity to progress through to the different schemes.

We have, however, achieved an encouraging increase year on year in the percentage of lower SEB applicants that have been recommended for appointment. Prior to

Our performance story

the Bridge Group report, the proportion of applicants recommended for appointment who are lower SEB remained fairly unchanged until 2017. The Bridge Group report was clear evidence of how we are actively engaged with the challenge of socio-economic diversity in the Fast Stream. Since implementing the report's recommendations that proportion has gone up from 4.2% in 2016 to 8.3% in 2017 and then up to 9.1% in 2018. We recognise we still have more to do and are fully committed to maintaining our efforts.

Fast Stream applications and appointments by diversity group, 2018

A direct comparison can be made here between the percentage of applicants which fall into each diversity group and the percentage of people recommended for appointment. The aim would be to have the proportion at application level reflect a similar proportion at appointment level for each diversity group. There is a positive comparison from application to appointments for female, disabled and LGBO candidates. However, we need to improve on the conversion of minority ethnic and lower SEB candidates from application to appointment.

Internships

Our internship programmes are an important part of how we look to increase the diversity of applicants and appointments to the Fast Stream.

Applications to the Early Diversity Internship Programme (EDIP) have increased more than tenfold since its launch in 2015. Of the

1,112 applicants in 2018, 63% were female, an increase of around 7 percentage points since 2016. The proportion of minority ethnic applicants has remained high; the figure stood at 86.4% in 2018.

While numbers are relatively small and should, therefore, be treated with caution, the proportion of applicants recommended for appointment who were disabled increased to over 13% in 2018. We are concerned the proportion who were lower SEB fell from 32.7% to 23.1%. We are reviewing the reasons behind this in order to implement targeted action for our next recruitment round.

Of those recommended for appointment, the proportion who were female or minority ethnic remained similar in 2018 to the previous year at over 65% and over 85% respectively.

The Summer Diversity Internship Programme (SDIP) achieved a similar boost. There were 13% more applications in 2018 than in 2017, taking the total to around 3,040; applications had more than doubled between 2016 and 2017.

More than 60% of the applicants recommended for appointment were female; this has been the case for the last two years. Between 2016 and 2018 more than three-quarters of applicants were minority ethnic. And we have seen a steady increase in the proportion of lower SEB candidates recommended for appointment from 25.1% to 28.2% between 2016 and 2018.

Our performance story

Fast Track Apprenticeship

Diversity group representation among those recommended for appointment increased across the board from 2017 to 2018. LGBO candidates represented 10.7% of those recommended for appointment (up from 7.5% in 2016) while disabled candidates represented 9.7% (up from 7.4% over the same period).

Despite an increase in 2018, the proportion of candidates recommended for appointment who are minority ethnic remains below the 2016 level at 14.2% (17.4% in 2016).

Although this can partially be explained by the larger number of applicants versus available postings, we are working on our assessment processes to make sure we are providing the right opportunities for applicants to progress.

Taking action on diversity

Fast Stream and Early Talent is committed to removing barriers to the success of diverse talent at entry stage and beyond.

The programmes are crucial pipelines for leadership roles, and our aim is to expand representation to match the relevant eligible populations and ensure we deliver on making Civil Service leadership reflective of the society it serves.

Our approach emphasises connecting the Fast Stream graduate programme, Fast Track apprenticeship programme, diversity internships and work experience programmes with the best candidates, including under-represented groups

Principal diversity interventions

- Rolling-out the two-year action plan arising from the 2016 Bridge Group report on removing barriers to those from diverse socio-economic backgrounds
- Introducing a new methodology for measuring socio-economic background
- Introducing a diversity-focused attraction website with clearer messaging, as well as more blogs, video content and profiles of diverse groups – supported by extensive social media activity
- Using our data to focus marketing and attraction efforts on specific communities, utilising relevant channels, messages and updated branding
- Introducing enhanced data insights for dynamic monitoring of progress
- Delivering curriculum-based interactions with targeted universities and engaging with widening participation teams, incorporating enhanced support for students – including piloting a new positive action package for universities
- Mobilising existing Fast Streamers, Fast Trackers and senior civil servants to be role models for the programmes on campus and at events
- Developing our early talent pipeline, encompassing EDIP and SDIP, piloting a new Autism Internship Programme, Schools Outreach Work Experience Programme and Year 9 Discovery events

Taking action on diversity

- Working with diversity partners, such as Rare Recruitment, MyKindaFuture and Elevation Networks – who provide insights into our diverse groups, and assist in identifying potential applicants, and help extend the reach of our marketing
- Providing support for diversity interns through more performance management and selection skills/ self-confidence coaching
- Using the “Fast Pass” approach for fast tracking summer interns to the Fast Stream assessment centre stage to help increase conversion
- Enhancing the Fast Stream assessment process by removing cognitive tests for most schemes, streamlining our e-Tray testing format, utilising a strengths-based video interview methodology and introducing a shorter, more engaging assessment centre format
- Fully updating our approach to Fast Track apprenticeship recruitment, making it more digital and a more positive candidate experience
- Bringing in a regional assessment centre – the first outside London – to engage better with candidates across the country
- Accelerating time to offer, to support engagement of under-represented and other groups.
- Developing a new talent definition that captures critical dimensions of more inclusive methods of identifying success.

Schools Outreach

The Schools and Colleges Programmes outreach teamwork to support high potential students from a lower socio-economic background, raising aspirations, inspiring and informing about the work of civil servants and our entry routes.

We identify and actively engage schools that have a higher than the national average percentage of pupils eligible for free school meals.

Core programmes

Over the last two years, our Work Experience Programme has provided over 300 target students aged between 15 and 18 with opportunities to see what it is like to work in government. We have also supported other departments to deliver their own placements. This activity is on course to deliver about a further 150 work experience places.

We have mentored over 130 students. We started with only a small mentoring pilot of 22 schools. We are now planning to reach 200 schools by 2020.

We are very proud that we have already exceeded our 2020 target of 2,000 attendees to our Year 9 Discovery Events. We achieved 3,250 participants by Spring 2018.

“ I will 100% recommend this placement to every student no matter what their career path is because the Civil Service is so broad and interconnected. During this placement, you learn valuable skills that you will never learn in school. The managers are great people who give you a boost into the world of work in which institutions such as schools cannot deliver. It is a once in a lifetime opportunity and I cannot express in words how amazing this experience will be. ”

Student

As a result of taking part in our work experience programme, students find it informative. The majority would consider a future career in the Civil Service. 92% of students who attended our Discovery Events last year reported that they now understand much more about the work of civil servants.

“ A big thank you to you all for supporting our students with their work experience. The students have all shared that the experience was fantastic and one that they will take with them through their adult lives. The majority of our students who took part said they are interested in the Civil Service Apprenticeship Programme. ”

School Careers Adviser

Schools Outreach

In addition, we work to support impromptu requests that meet our social mobility criteria, typically to attend a careers fair. This has seen us respond to about 75 extra events out of approximately 200 requests.

We have started to create a Civil Service Schools Outreach Network (CSSON). We are bringing together colleagues across government so that we can improve our offer to students, schools and colleges in a more collaborative, efficient and streamlined way.

And we have worked with a leading industry partner, All About School Leavers (AASL), to create a new Diversity and Inclusion Award for the School Leaver industry market to increase activity in this area across the sector. AASL work to give school leavers career advice and help them find jobs.

Marketing attraction

Fast Track

We time our Fast Track recruitment campaigns to coincide with National Apprenticeship Week usually in the first week of March.

The number of Fast Track applications almost tripled from 7,215 in 2016 to 21,561 in 2017. In 2018 we experienced another increase to 24,477.

The Earn, Learn, Succeed programme slogan and our existing 'Five Doors' video content, continued to resonate with our main audiences. The core message was that Fast Track provides a genuine alternative to university. We built Fast Track brand awareness through increased engagements on social media. This included Twitter, up 118%, and on Facebook, up 59% on the previous year's campaign. We increased our use of LinkedIn and Instagram. Our posts and adverts were seen at least 16 million times during the campaign window. In 2018, we introduced a new campaign slogan: 'Where Brilliant Begins'. This highlighted the route for apprentices completing the Fast Track programme to apply to join the Fast Stream without a degree, directly contributing to social mobility.

The sharp increase in applications was attributable to a range of factors. We started our organic posting (that is unpaid social media promotion) earlier in the year to build a larger number of pre-registered prospective applicants. This enabled us to alert over 6,500 people that they could now apply as the campaign window opened.

We included each of our schemes as vacancies on Civil Service Jobs and promoted the roles

via local job centres. We piloted new social channels, aggregators and job boards. We targeted the geographic locations where we had traditionally attracted fewer applications. We used profiling to share our content with each of our target audiences. We paid particular attention to developing messaging to support each of our campaign pillars: 'Earn, Learn, and Succeed'.

In 2018, the Fast Track apprenticeship expanded to include a new scheme, Policy. Marketing focused strongly on promoting this scheme, through new print, digital and video content. The campaign again used strong geographic and demographic targeting through a mix of paid digital advertising and job board advertising. Complementing this was a range of work undertaken by Cabinet Office press office to promote roles through a range of local and regional media.

New in 2018, were stronger alliances built with partners, including the National Apprenticeship Service. This saw role profiles actively promoted and postcode-specific direct mails issued to prospective apprentices registered with the service.

Fast Track ambassadors supported the campaign with a range of blogs, case studies and tips. We posted six short video clips on social media, featuring ambassadors talking about the three words they would use to describe their experiences and development on the Fast Track Apprenticeship programme. These all helped amplify the campaign significantly. The social and paid media posts drove around 100,000 clicks through to the Fast Track website on GOV.UK.

Marketing attraction

Fast Stream

2017 campaign

The campaign ran through a nine-week application window from 29 September to 2 December 2016. The marketing strategy was guided by the Bridge Group recommendations about how to diversify the Fast Stream. In particular, to increase the number of successful candidates from a lower socio-economic background. We introduced significant changes to attract the best candidates from a broad, diverse applicant pool. These included:

- focusing our campus outreach work on those universities with the most diverse student populations;
- mobilising the existing Fast Stream workforce to be ambassadors for the programme and deliver outreach activity;
- recruiting and allocating 14 deputy directors to work on campus to build sustainable relationships with faculty at the target universities. Wherever possible we assigned them to the institutions they had themselves attended and to curriculum subjects they had studied;
- introducing enhanced data insights for dynamic tracking of our process;
- increasing the availability and visibility of core messages to support lower socio-economic applications, including an updated micro-site; and

- promoting the innovative 'Fast Pass' route for successful interns on the Summer Diversity Internship Programme to progress straight to final stage assessment centres.

We trained campus outreach teams taking a curriculum focused approach for engagement with faculties. In response, campus teams reported a positive impact in increasing engagement with students from lower socio-economic backgrounds. Teams also reported attending a wider range of events at universities, including Q&A panels, presentations, networking events, drop-in sessions and skills and insight sessions.

Campus teams also continued their work with universities' online platforms and social media. The programme of engagement included more than 300 events at 45 universities. We also attended off-campus events including national and regional jobs fairs and graduate careers events. As a result, of the 2016/17 campaign, including this new outreach approach, the number of applications rose to 40,570 (excluding in-service candidates).

Marketing attraction

2018 campaign

The 2017/2018 campaign saw continued focus a series of marketing actions to deliver an inclusive and engaging campaign. These actions saw us:

- run our campaign through a shortened application window from 14 September to 26 October 2017;
- market our two diversity internships, SDIP and EDIP, alongside Fast Stream as part of the core campaign;
- change our historic Fast Stream strapline ‘Where will you lead?’ to ‘Fast Stream: Where talented people do brilliant things’; and
- target diverse audiences through a range of audio, visual, and alternative media channels. These included Spotify, Mumsnet, LinkedIn and Instagram; and
- train over 400 Fast Stream ambassadors to deliver campus activity, running 245 events, across 45 university and other venues.

The team produced a new, innovative brochure to promote Fast Stream, SDIP and EDIP together on campus. Our programme of regular organic social media posting helped drive unprecedented levels of social engagement.

The campaign achieved a 51% increase in web visits, Facebook impressions up 67%, Twitter by 72% and LinkedIn by 116%. 40,457 (excluding in-service candidates) people applied to the Civil Service Fast Stream. 3,037 to the Summer Diversity Internship Programme. And diversity representation continued to rise across the applicant pool.

How we assess

Our selection processes are fair, objective and efficient.

We recruit strictly on the basis of fair and open competition and selection on merit, in line with the Civil Service Commissioners' Recruitment Principles.

We do everything possible to ensure that our assessment methods are scientifically robust, able to identify relevant attributes and are objective and capable of withstanding close scrutiny.

We use the latest selection technology and seek constantly to maximise its effectiveness – as well as ensure it is identifying the qualities we are seeking and is fair to all groups.

Fast Track Apprenticeship

The Fast Track selection process consisted of the following stages in 2017 and 2018:

- online application form;
- online tests; and
- assessment centre.

Up to date assessment methodologies are used for Fast Track at each assessment stage. This includes behavioural, situational and cognitive testing against criteria, as well as a bespoke assessment centre, along with detailed candidate feedback provision for the assessment centre stage.

Diversity Internships

The Early Diversity and Summer Diversity Internship Programmes (EDIP and SDIP) consist of the following stages:

- online tests (a situational judgement questionnaire and behavioural-based multiple choice questionnaire);
- online application form used to shortlist candidates (SDIP only); and
- telephone interview against competency and motivational areas.

Fast Stream

We aim to complete the selection process in the shortest possible time and to make job offers to the best candidates as quickly as we can, supporting candidate engagement.

When determining who has been successful we gradually finalise pass marks to ensure that we still have places remaining at the end of the recruitment year for high scoring candidates who we see late in the schedule. In addition, by ensuring that initial stages are online, we allow candidates to drive themselves through each stage of the process using a personalised applicant system.

The selection process in 2017 and 2018 consisted of the following stages:

- online tests (a situational judgement questionnaire and behavioural-based multiple choice questionnaire);

How we assess

- online in-tray exercise (the “e-Tray”);
- video interview;
- additional information stage for relevant schemes, along with a numerical test for Commercial and Finance schemes; and
- Fast Stream Assessment Centre (consisting of a leadership exercise, analysis exercise and group exercise).

Individuals entering any Fast Stream option have to pass the generic Fast Stream Assessment Centre. Some Fast Stream options apply a final selection procedure after the assessment centre before deciding who to recommend for appointment.

All candidates receive detailed feedback on their performance at the assessment centre in the form of an outcome report.

The Fast Stream runs a Direct Appointment Scheme for those who are narrowly unsuccessful at the Fast Stream Assessment Centre. This scheme offers candidates a mainstream post at either Executive Officer (EO) or Higher Executive Officer (HEO) grade if one becomes available. For the 2017 entry, 378 EO posts and 110 HEO posts were offered. In 2018, 587 EO posts and 539 HEO posts were offered through the scheme.

Achieving social mobility

An overwhelming priority of Fast Stream and Early Talent is social mobility, seeking to shift the horizons of individuals. We have measured applicant socio-economic status since 2011 (perhaps the first graduate recruiter to do so systematically). Our challenge was we had seen little shift in application or success rates.

As with our marketing attraction effort, we took actions on our recruitment process following the groundbreaking review by the Bridge Group. Principal activity included:

- introducing a new methodology for measuring and monitoring socio-economic background;
- introducing enhanced data insights for dynamic monitoring of progress in terms of application numbers and socio-economic background; and
- delivering a critical review of the way in which the Fast Stream defines and identifies ‘talent’, working towards more inclusive methods of identifying potential.

How we assess

Talent identification

Notable changes included a new selection approach that was specifically focused on diversity enhancement, social mobility and increasing engagement. This approach was reflected by the following:

- removal of the verbal and numerical online assessment to enhance diversity;
- new, updated digital testing relating to behavioural and situational judgement attributes;
- an online strengths-based video interview assessment, reducing the focus on candidate experience towards motivational/potential elements;
- a half day, rather than one day, assessment centre
- a new regional assessment centre based in Newcastle to reach out to a more diverse population; and
- re-focusing assessment on fresh talent areas, such as leadership and learning agility.
- Our assessment centre actions meant we quadrupled the number of candidates that can be assessed in a day and therefore helped to deliver a shortened time to offer and better engagement.

Fast Track Apprenticeship schemes

Fast Track continues to attract and develop the best public servants who represent modern Britain in all its diversity.

Across 2017 and 2018 the programme onboarded 976 Fast Track apprentices providing them with the opportunity to kick-start their career in the Civil Service, offering stretching and developmental roles across a range of departments and professions. Our apprentices are supported to complete a Level 4 qualification over a two year period, in one of the following professions:

- Business Administration
- Commercial
- Finance
- Digital, data and Technology
- Policy
- Project Delivery

Fast Track Policy is a new scheme introduced in 2018 and has been a real success. Over 2,803 applications were received for the profession in its first year, a real achievement.

In terms of geographical footprint, in 2017 we placed Fast Track apprentices across 33 locations and 26 departments. In 2018 we achieved placements across 31 locations and 24 departments.

The number of opportunities offered across a range of locations attracts high calibre applicants from all backgrounds and this has continued to strengthen the diversity profile of the Fast Track apprenticeship.

Since the Fast Track was launched in 2013, over 2,000 apprentices have joined the programme and kick-started their Civil Service career. However, our ambition is to ensure the Fast Track continues to improve.

This year we have been working to identify opportunities to evolve and enhance the delivery of the scheme. Our ambition is to deliver a consistent quality of experience for apprentices across all departments, professions and locations through:

- improving delivery by identifying opportunities to continuously improve the experiences of apprentices from recruitment to graduation;
- increasing the quality of learning provision by ensuring consistency across all schemes and locations; and
- creating a greater sense of community by giving our apprentices the opportunity to form strong networks, supporting individuals to come together, to share ideas, raise awareness of challenges and provide support to each other.

We are already taking steps to address these three areas and this is something we will continue to focus upon in the upcoming 2019 Fast Track campaign.

Fast Track Apprenticeship schemes

Case Study:

Daniella Randall

When I finished my Fast Track Apprenticeship I knew that to support my development I needed to try something completely new and take myself out of my comfort zone. I was offered the opportunity to move across to the Department for Exiting the EU (DExEU). So I took the decision to take the leap and leave my current team in Civil Service HR.

I joined DExEU's Flexible Resource Unit meaning I had the opportunity to work on many different areas. These included DExEU's estate strategy, governance duties for their Executive Board and Operations Committee, the onboarding of Non-Executive Directors and supporting policy teams on various briefings. Most of these areas were completely new to me and it was a great experience working in the heart of government. The Fast Track scheme prepared me for this varied way of working. The network I had built up from my cohort meant that there were a few familiar faces across the department.

While at DExEU I was contacted by one of my previous Deputy Directors asking whether I was still interested in Project and Programme Management. This was something I had previously told her I was really keen to develop in. She let me know about a new Portfolio Management Office (PMO) being set up in CSHR that she felt would be a great opportunity for me. I was instantly interested in joining this new team. Although I enjoyed my

time at DExEU was also grateful to be returning to familiar terrain!

I worked alongside some really talented Project Delivery professionals within the PMO. They gave me many opportunities to learn and grow within this area. Knowing this was something I wanted to take forward, I have recently secured my promotion to SEO. I took on the role of Resources and Programme Manager within the Learning Delivery Team in CSHR. I am now managing a small team working to support key priorities across the learning and leadership space. I know this role will stretch and develop my skills in this area further.

Since the end of the scheme, I have taken every opportunity that has come my way to support my development journey. Whether that's been formal learning opportunities (e.g. training to become a Mental Health First Aider); regularly meeting with my mentors; seeking out shadowing opportunities; or taking time to attend internally held learning sessions. There are so many great opportunities across the Civil Service to continue your learning and development journey after the end of the apprenticeship scheme that has provided me with the support and stretch to continue growing my career.

Fast Track Apprenticeship schemes

Case Study:

Hannah Turner

My career began in HMRC, gaining invaluable experience in HR and Talent Management while completing a Foundation Degree in Business and Administration.

Upon completing my apprenticeship, I was keen to progress my career while experiencing new areas of Government. I joined the Department for Education leading on Academy Policy for Doncaster. I spent time interacting with Local Authorities, Trust CEOs and headteachers on a daily basis.

In 2017, I moved to the Home Office to head up the Digital Internship and Junior Development Programme. This was recently named 'Technology Development Programme of the Year'. My apprenticeship helped me gain the confidence to speak at government and industry-wide events. It has also enabled me to access further qualifications such as the Diploma in HR Management with CIPD I am currently working towards.

I am delighted that I recently won the Rising Star Award for the Yorkshire and Humber region!

Our internship programmes

Our Diversity Internship Programmes give people from diverse backgrounds the opportunity to see what a career in the Civil Service is like.

It puts talented undergraduates and graduates on a work placement in a government department. Our internships are aimed at the following groups: minority ethnic, lower SEB and people with a disability.

Interns can undertake Fast Pass, a quicker route to Fast Stream selection where interns who receive a positive appraisal are fast-tracked past the initial online selection stages. They also receive coaching support.

We offer two different internship programmes with the aim of fostering talent from a range of diversity groups and providing a platform for a potential career in the Civil Service.

Early Diversity Internship programme (EDIP)

The Early Diversity internship programme was introduced in 2015. The EDIP is a one week (five days) placement in a government department based in London, designed to give a better insight into a career in the Civil Service. It is available to first-year undergraduates who meet the diversity criteria and includes the following:

- a series of stimulating corporate networking and social events;

- an assessment survival workshop with all you need to know about applying for graduate vacancies;
- an allocated Fast Stream buddy; and
- an opening and closing reception attended by high-profile speakers, such as Civil Service diversity champions and inspirational external figures.

Applications to the EDIP have increased more than tenfold since its launch in 2015. Of the 1,112 applicants in 2018, over 60% were female; this figure was around 56% in 2016. The proportion of applicants who were minority ethnic has remained high; the figure stood at over 80% in 2018.

While numbers are relatively small and should, therefore, be treated with caution, the proportion of applicants recommended for appointment who were disabled increased to over 13% in 2018. The proportion who were lower SEB fell from 32.7% to 23.1%.

Of those recommended for appointment, the proportion who were female or minority ethnic remained above 60% and 80% respectively as in 2017.

Our internship programmes

Summer Diversity Internship Programme (SDIP)

Historically the Summer Diversity Internship programme has placed approximately 300 interns each year. In 2017, we increased the number of interns to 357 and then to 446 in 2018. In future years we will seek to increase the size of the programme significantly because the data shows that candidates are more likely to be successful in the Fast Stream selection process having gone through SDIP.

The SDIP programme is longer than the EDIP, covering six to nine weeks over the summer period. It is aimed at students in the final two years of their degree, currently achieving a 2:2 or higher in any degree subject. Again, applicants are required to meet the diversity requirements.

The SDIP is designed to be a more immersive and intensive Civil Service experience. Candidates carry out a variety of work ranging from conducting research to helping to draft policy documents.

We have worked hard to increase the number of participants in the last couple of years. This is even more of a priority following the introduction of Fast Pass in 2016. The Fast Pass enables SDIP interns to progress to the final stage of the Fast Stream selection process (the Fast Stream Assessment Centre) if they perform satisfactorily during the internship.

There were 13% more applications in 2018 than in 2017, taking the total to around 3,040; applications had more than doubled between 2016 and 2017. More than 60% of the applicants recommended for appointment were female; this has been the case for the last two years. Between 2016 and 2018 more than three-quarters of applicants were minority ethnic. We have seen a steady increase in the proportion of lower SEB candidates recommended for appointment from 25.1% to 28.2% between 2016 and 2018, both in terms of applications and recommendations for appointment.

Our internship programmes

Case Study:

Kasim Ali, Early Diversity Internship Programme

I first heard about the EDIP internship through a careers event held at my university. When I attended the talk, I still classed myself as a “fresher”, unknown to the concept of a graduate scheme. Listening to this talk held by the Fast Stream, it really inspired me to think about careers now in order to develop core skills which can be only be enhanced outside of academic studies. As soon I left that talk, I knew I was definitely going to apply. The EDIP seemed like the perfect opportunity to provide a springboard into the graduate world. This particular internship stood out for me amongst others due to nature of the sector you would be working in and the emphasis on diversity. I was also interested in seeing how a public organisation provides services for all citizens given the Civil Service does not have a focus on profit.

The internship was thoroughly interesting. I had the chance to experience a fast-paced environment where employees have to immerse themselves into projects. The EDIP also had great variation to it. I got the chance to participate in skills workshops, having the chance to effectively gauge what is expected of employees and learn about the intricacies of the Civil Service. I was also given many opportunities to network with so many talented Fast Streamers and learn about all the different pathways the Fast Stream has to offer. It was clear to me that everyone I met in the Civil Service was strongly passionate about their

work, which really inspired to get the most out of the EDIP as possible.

One highlight that particularly stood out for me, during my time on the EDIP, was attending an Energy and Climate Change meeting. It was fascinating to be a part of talks discussing environmental problems on a national scale. Through this meeting, I was also able to recognise the importance of diversity, with different people from different backgrounds all contributing different points of view which really stood out for me. This meeting allowed me to gain an appreciation of how diversity is an essential component of the Civil Service in order to reflect a diverse society. There was also a really beneficial application workshop during the EDIP, where I was able to get helpful guidance and tips on the Fast Stream application process.

I would strongly advise anyone who is thinking about internships to apply to the EDIP without hesitation! The feeling of starting a new chapter in your life at university coupled with the daunting fact that you will have to decide a career path in the next few years was very overwhelming for me. However, undertaking the EDIP strengthened my confidence for the graduate recruitment process. I am able to take away invaluable knowledge and newly developed skills, making me eager to apply for the Fast Stream.

Our internship programmes

Case Study:

Osama Qayyum, Summer Diversity Internship Programme

In summer 2018, I was selected to intern at the Cabinet Office as part of the Summer Diversity Internship Programme. I was with the Diversity and Inclusion Strategy Unit working on a number of exciting yet insightful projects. Luckily for me, there was also another intern working on the same project which made it all the more better.

Fortunately for us, we came in at just the right time when the team was working towards its big flagship event titled 'National Inclusion Week'.

We planned to hold a number of practical workshops which aimed to equip participants with steps they could take in order to make their own working environments more inclusive. One of the workshops was based on leadership and would highlight the importance of Inclusive leadership and how someone can strive to become an inclusive leader.

I have learned a great deal. It has truly made me appreciate the importance of inclusion in the workplace. And it has also made me realise that diversity isn't just important because we must represent our wider community, but that there is a business case for it too. Studies have frequently shown that a diverse workplace does a lot better when it comes to profitability and growth. I will certainly be taking these experiences on to my next endeavour.

One of the highlights of the internship was when I was invited to Number 10. This gave me a real insight into what goes on behind the scenes. I also had a tour of The Foreign and Commonwealth Office. One thing that was constant and really stood out throughout the internship was the sincere advice I was given by my seniors. Despite coming across interns for years, they shared the same passion and energy when talking about their work.

This internship has been a unique one for several reasons. But the one thing that has really stood out is the passion of the civil servants, the drive to make this country better day in day out. They are truly inspirational and in many ways, don't always get the credit that they deserve.

Fast Stream schemes

We offered 15 different schemes to applicants.

These follow the two models for managing the Fast Stream, centrally managed and department or profession managed.

The following schemes are currently part of the centrally managed model: Generalist, Digital, Data and Technology, Government Communication Service, Science and Engineering, Finance, Commercial, Government Statistical Service and Project Delivery.

The following schemes are managed by a department or profession: Houses of Parliament, Diplomatic Service, Government Economic Service, Government Statistical Service, Government Social Research, Government Operational Research Service and Human Resources.

Changes to the schemes

In April 2018, the Civil Service Talent Board re-affirmed that the purpose of the Fast Stream. That is to attract, develop and retain a diverse and strategic pipeline to the Senior Civil Service. A number of changes have now been introduced for the Generalist Fast Stream and the 2018 cohort who joined us at basecamp this autumn. Fast Streamers already on the scheme also benefit from the transition towards the new model. These changes include:

- implementing a “cluster” based, or career interest areas, model for generalists. We have matched over 800 Fast Streamers into one of their top three preferred clusters;

- shortening the scheme to three years (which will also apply to the Commercial and Science and Engineering schemes). This means Fast Streamers have the opportunity to bring forward their readiness for successful graduation from the programme and to take the next exciting step in their careers;
- worked with more than 30 government departments and agencies to source 12-month postings. These will give Fast Streamers greater depth, focus and stability while they develop their leadership skills; and
- worked to improve the experience for all Fast Streamers through updates to our assessment and performance policy and processes. These include our rigorous End of Scheme Assessment, to incorporate the new “success profiles” approach which focuses on leadership, behaviours and strengths.

We are currently developing an approach to external secondments where they will be discretionary to support individual development rather than mandatory for everyone.

Alongside this, we have made significant improvements to our digital capability. We have rolled out Workday (a cloud-based HR platform) to almost 2,000 Fast Streamers across the centrally managed schemes, enabling them to manage their own profiles and improving access to data and information. Fast Streamers now have access to a new intranet platform that enables communication to be more efficient, engaging and accessible.

Fast Stream schemes

Our learning offer for Fast Stream candidates

Our learning offer continues to develop. We introduced Stepping into Leadership for the first time for third-year Fast Streamers across all centrally managed schemes.

The programme supports Fast Streamers to own their leadership learning. It uses a range of activities including workshops, online tools and peer support.

Fast Streamers provide very positive feedback. They report a good balance of theory and practice. The programme helps them think about their current style of leadership and what they would like to develop.

In addition, we have:

- introduced regional courses;
- improvements to the curriculum offer based on evaluation and feedback; and
- developed two new curriculum maps for the 3 and 4-year programmes.

Fast Stream schemes

Case Study:

Sajan Bhakoo, HR Fast Stream

When I left school, I chose to study history at university because I couldn't decide what career I wanted to go into after. When I finished that, I stayed on for a masters, because even after three years of thinking, I still didn't know. When I finished that, I joined the Fast Stream.

Sadly there had been no fourth year revelation, however the Fast Stream was perfect for that very reason. What attracted me above all else was the range of possibilities the Civil Service offered, along with the knowledge that the purpose of the graduate scheme was not tie you to a particular path, but to enable you to try different things and work out for yourself where you might want to end up.

And so, I headed off to my first posting at the Department for Transport with an entirely open mind. Straight away, I was amazed how much autonomy I was afforded by my managers, and also how much exposure my role gave me to senior leaders and politicians. More than anything, though, the role I was given was so broad that I was able to decide for myself what I wanted to prioritise, and the pieces of work I am most proud of ended up being the ones which I found myself and weren't even in my job description when I started.

The ability to simultaneously experience work as a business partner, a cohort leader, a project manager and a transformation specialist gave me the type of breadth which I longed for. With

each project, I was able to slowly determine which types of work I enjoyed – and also which I did not. I was able to work out how I liked to work – and also how I did not. And, in learning more and more about how the wider Civil Service functioned, I was able to take an educated guess what future roles and departments I might find interesting – and, crucially, which I might not.

My second placement gave me everything my first placement had not. Joining the Foreign and Commonwealth Office, I moved from a large operational department, to a relatively small policy one. Thus, I was presented with a clean slate, and a whole range of completely new roles which I could use to continue my professional introspection.

Here too, the sheer range of experiences sets the Fast Stream apart from any other graduate scheme. Even just in the past few months, I have launched a new consular support policy, helped negotiate funding with HM Treasury, written a briefing for the Prime Minister from the Crisis Centre, presented numerous papers to our Executive Committee, and even met the Queen!

For me, what makes the Fast Stream so great is that even after all that, I still have no idea what I want to do when I finally graduate next year! But half the fun is taking all the opportunities which come your way and letting your career build around you, rather than the other way round.

Fast Stream schemes

Case Study:

James Yan, Generalist Fast Stream

I first heard about the Fast Stream when I was doing my A levels but didn't really know what it was. After more research I thought it could be a really interesting career path to try and pursue. So I looked into how I could gain more insight into the sector and prepare for applying. I did the Summer Diversity Internship Programme (SDIP) and was placed in the Future of Europe strategy team at the FCO for six weeks. This gave me a good understanding of the how the Civil Service works. And it made me appreciate the efforts of the Civil Service to increase diversity in its people to reflect the society it serves. My ethnic background is Chinese and there aren't many people like me in the Civil Service. So it was great to be able to add my perspective to the conversation. The SDIP made me decide I really wanted to apply for the Fast Stream. My next step was ensuring I put in the best application I could.

In my final year of studying International Management and French at University of Bath I dedicated a lot of time to practising online tests and going through my previous work experience (I worked at a startup for my year abroad) to see what competencies I could cover. The hard work paid off and I started the generalist Fast Stream in October 2015. My first posting was in UK Export Finance (UKEF) doing product development. I appreciated the amount of responsibility and training I got from day one. This is something that I really value about my experience in the Fast Stream. There have

been plenty of opportunities in my various postings to develop my skills as a leader.

After UKEF I went on to be a devolution strategy policy adviser at Department for Communities and Local Government, a children and young people's policy adviser for Barnet council during my secondment, a contracts manager at Department for Work and Pensions, a High Value Campaigns programme manager at Department for International Trade (DIT) and right now I am working on the Comprehensive and Progressive Agreement for Trans Pacific Partnership also in DIT.

In my experience I have found the culture in the Civil Service to be supportive, positive and collaborative. In general, there is an unwavering commitment to honesty and integrity, values which I hold very dear and ones which are crucial for public service and in any walk of life. I have thoroughly enjoyed my time on the Fast Stream. And am still amazed at the variety of work you can get stuck into to help improve different aspects of society.

Fast Stream schemes

Case Study:

Trudie Jeffery, Grade Manager, Department for Exiting the European Union (DExEU)

In the DExEU, we recognise the importance of having Fast Streamers to help us meet our business objectives as well the valuable development we can give them.

We have a mixed employment model. We use all talent pipelines available to us, drawing in expertise through loans, talent schemes, external hires and secondments. Fast Streamers are critical for us to meet our flexible resourcing requirements. We recognise that for Fast Streamers, in these exceptional times in government, working in DExEU is an important part of their ongoing development and ability to work with complexity and at pace.

We have a comprehensive pastoral care, onboarding and induction process. This makes

sure the Fast streamers in DExEU get all the development and stretch they need to do their job and to help them demonstrate the breadth and depth they need to be effective senior civil servants. This is all supported by the Fast Stream team who help us to deliver this vision by running workshops for our activity managers and resilience workshops for the Fast Streamers.

The department and I appreciate all the ongoing help and assistance the Fast Stream team have given us by also working together in agreeing to extensions and other solutions to help with our business deliverables. Their flexibility and working at pace to accommodate our considered requests is a true example of excellent teamwork and collaborative working between DExEU and FSET, resulting in both business and individual needs being met.

Testimonies from Fast Streamers currently working in DExEU

Georgina Holmes Year 1 Generalist Fast Stream

DExEU is quite different from other departments in that everything changes so quickly. You have to be able to adapt and fling yourself into whatever situation comes your way. That being said, developing that adaptability stands you in really good stead for future postings and

is a good life skill in general! DExEU is also a great platform to learn about how different departments work. Much of the work here involves communicating across Whitehall and having your eye on lots of different policy areas. I've really enjoyed my time here so far and think it's a really good place to start or continue your Fast Stream experience.

Fast Stream schemes

Testimonies from Fast Streamers currently working in DExEU

Nick Edmonds **Year 2 Generalist Fast Stream**

Working in DExEU as a Fast Streamer is a truly unique experience. It's a chance to see, right from the middle of it all, how government is tackling one of the greatest programmes of change since the second world war. Wherever you are across the department, opportunities abound to play your part in delivering stimulating and high-level work. This ranges from supporting negotiations or planning for the future economic partnership, to ensuring that the United Kingdom is fully

prepared to adapt to whatever the outcome of Brexit may be. There is a big contingent of Fast Streamers around the department. I've struck up a number of good friendships here, and I've always been able to talk to my manager, or peers if I've ever needed support. DExEU recognises that it is a very different environment in which to operate. The department runs a comprehensive set of introductory and training sessions when you start, making sure you're comfortable with the EU context and have the skills to contribute, develop yourself and enjoy your time here.

Chris Sidhu **Year 2 Generalist Fast Stream**

My time at DExEU has provided me with an environment in which I can develop my skills at an accelerated pace, even by Fast Stream standards. The constantly shifting context of Exit provides Fast Streamers with plenty of opportunities to be involved with and to have responsibility for significant and exciting pieces of work. This is a chance to shape the outcome of the most significant political issue of our time and to see it unfold from a ringside seat.

DExEU is a young and flexible department that isn't stifled by unnecessary hierarchy or undue process. It's really about who's the right person to be in the room and do the job. Being a central department means that you interact with officials across Whitehall, across the country and internationally, allowing you to gain exposure to a range of policy areas and ways of working all while staying in a single role. I've had regular ministerial exposure, both to junior and senior ministers across Whitehall and have been to Brussels and various parts of the UK during my time here.

Fast Stream schemes

Testimonies from Fast Streamers currently working in DExEU

Dylan Bruce **Year 2 Generalist Fast Stream**

The fast-moving and varied work in DExEU is constantly providing me with new ways to stretch and develop, learning new skills and taking opportunities to be a bigger part of 'bigger' work. This is notwithstanding the fascinating experience of working on the frontline of one of the UK's most significant and complex policy problems in recent history. I've found myself leading cross Whitehall processes, organising diplomatic engagement and getting to grips with the intersection of international and domestic policy in a way I can't imagine getting close to in another department.

Absent an entrenched hierarchical culture, the department is fresh and flexible. Rewarding capability and letting you make your mark on a department that's work is being formed day by day, minute by minute, by Fast Streamers like me. The people in DExEU are usually driven, intelligent and have taken their role to rise to a new challenge. It is exactly the kind of attitude and culture that we are encouraged towards in the Fast Stream. The benefits are only multiplied when that is replicated across the whole department. On top of all this, there is an excellent support system and a real attentiveness to important issues like mental health. I've often felt challenged and stretched in DExEU, but very rarely have I felt stressed or unhappy.

Thomas Charles **Year 4 Generalist Fast Stream**

If you're going to be a civil servant then working on the hottest political topics and the greatest delivery challenges of the day ought to what drives you. There's no doubt that Brexit, and therefore working in DExEU, fulfil those aspirations.

The extraordinary complexity and challenging nature of the work has pushed me to expedite my development, gaining a breadth and depth of experience that might take far longer to gain in any other government department. That

stretch has also enabled me to perform a grade above my level and benefit from the experience of doing so.

The reactive and collaborative nature of the work means that there are endless opportunities to pick up new areas of work or push yourself further in areas where you recognise a development need or a requirement to fill a competency gap.

In spite of the challenges and pressures associated with working on such a complex task, the culture in DExEU is very collaborative, supportive and kind.

Fast Stream schemes

Testimonies from Fast Streamers currently working in DExEU

Joel Rosen

Year 4 Generalist Fast Stream

I've worked in DExEU for a year and seven months now; first in the Market Access and Budget Directorate, and then after a short secondment in the International Agreements and Trade Directorate. I'm now the Senior Policy Adviser for Switzerland in the 'Near Neighbours' (EFTA and Turkey) Team. I'm responsible for transitioning our agreements with Switzerland. It's a heady mix of policy, diplomacy, programme management, and law. And I wouldn't give it up for the world!

I was drawn to DExEU for two main reasons. It's arguably the greatest challenge the UK has faced since the Second World War. I couldn't think of a better environment in which to develop myself as a leader than the complex and highly ambiguous one Brexit presented me with. Secondly, I knew early on that this department would draw in some of the best and brightest civil servants (and non-civil servants too). People from whom I could learn and gain new skills.

So far, my time here has exceeded my expectations. I've had the privilege of helping build a new department from scratch, and still see some of the things I put in place a year on. DExEU took in a lot of Fast Streamers from the

start. We've played a huge role in shaping it, and have taken on roles involving enormous amounts of responsibility – from heading up bill teams to negotiating new international agreements. But as much as I've shaped DExEU, it's shaped me too. I feel I've become a better policy official with a wider range of skills. A leader who can flex his style to the situation and deliver collaboratively and inclusively under extreme pressure.

Yes, it can get hectic at times, but it's exciting and no day's the same. You learn to thrive in ambiguity and uncertainty and embrace your exceptional context. DExEU's got a friendly, collaborative and inclusive culture. Your colleagues have always got your back, and no matter how tough it gets we all support each other. It's no wonder we enjoy one of the highest people survey scores in Whitehall, and we attract some of the brightest and most highly skilled staff.

I'm keen to stay in this department for as long as I can. With the new challenges every day brings, the learning curve here has never flattened for me. I feel completely at home in this environment. While I don't know exactly where my journey will take me, I do know it's going to be absolutely thrilling and I think I'll continue to enjoy every minute of it.

Fast Stream schemes

Case Study:

Kohinoor Meghji, Senior HR Business Partner, Government Communication Service (GCS)

The development of diverse confident, inspiring and empowering leaders is a priority for GCS. That's why the Directors of Communication across the GCS collectively endorsed this specialist scheme. The GCS Fast Stream attracts passionate, talented individuals. They are keen to develop their skills while making an immediate impact in their teams. My team leads on defining the right experience and training to grow GCS Fast Streamers into leadership roles in some of our most high profile positions.

We give Fast Streamers the opportunity to demonstrate the full breadth of their skills working on communication projects across government. Communication is crucial in successful policy implementation. Whether it is raising awareness, influencing attitudes and behaviour, promoting effective operation of government services, supporting our citizens in times of crisis or helping them to understand decisions made. Fast Streamers in these roles learn the importance of balancing sound judgement and the ability to innovate with a different way of thinking. They add value by providing well-considered constructive challenge, sharing insights and best practice from their experience in other government departments and delivering impactful results.

We have been able to place GCS Fast Streamers into a range of roles across the main communications disciplines. Working on campaigns such as GREAT, people's pensions, public service recruitment, Change4Life, modern slavery, and apprenticeships. From the Number 10 digital team to strategic communications in the Foreign Commonwealth Office, internal communications in the Ministry of Defence and Campaigns in the Cabinet Office.

This scheme is one of a number of early talent initiatives for the profession, with GCS Fast Streamers playing an important role in ensuring our profession continues to be one of the most renowned, both within and outside of government. We look forward to developing the next cohort of future communication leaders.

Success measures

The success of the Fast Stream and Fast Track Apprenticeship is measured against a considered set of key performance indicators.

These indicators measure our success against our strategic objectives and are monitored by the Research and Analysis team within Fast Stream and Early Talent.

Attraction and recruitment

- The percentage of individuals by diversity category who apply to Fast Stream and its comparison to diversity in eligible candidate pools as measured by external benchmarks provided by the Higher Education Statistics Agency (HESA);
- The percentage of individuals by diversity category who apply to Fast Track and its comparison to diversity in eligible candidate pools as measured by external benchmarks.;
- The diversity of individuals appointed and its comparison to diversity in eligible candidate pools as measured by external benchmarks; and
- The length of the Fast Stream recruitment process from application to offer (Time to Offer) for at least 51% of applicants.

For Fast Stream, we source data from the Higher Education Statistics Agency (HESA).

Finding appropriate benchmarks for the Fast Track is challenging because of the requirements for Fast Track: that applicants must have five A* to C GCSEs but no degree. Isolating that population is not possible. Consequently, we have selected benchmarks on the basis that it must be:

- a. from government data, as recent as reasonably possible; and
- b. subject to reasonable pragmatic adjustments when there is a clear argument to do so.

Data sources include the Census, the Family Resource Survey, the Labour Force Survey and ONS Experimental Statistics on Sexual Identity.

The 2016 Bridge Group report stated the average time between an applicant applying for a graduate position and receiving an offer is eleven weeks. On average the Public Sector had the longest time from application to offer (15.5 weeks) while the IT and Telecommunications sector had the shortest (6.8 weeks). The Fast Stream time from application to offer at the time ranged from 18 to 31 weeks.

Our time to offer in 2017 was 24.6 weeks (median). In 2018 we achieved our goal of 12.9 weeks (median).

Success measures

Following appointment

- The proportion of individuals passing End of Scheme Assessments (ESA).

It is through these indicators we will demonstrate our progress in attracting and retaining people of talent and experience from a range of sectors and all walks of life in our Fast Track Apprenticeships and Fast Stream schemes.

Detailed analysis

The detailed analysis section presents statistics on the registrations, applications and recommended for appointments to Fast Stream and Early Talent programmes for the 2017 and 2018 recruitment period.

Changes from previous editions

We are continuously looking to improve the way we present our statistics, provide better readership and ensuring statistics remain central to our purpose. With this aim, we have made the following changes from previous editions:

- condensed the headline statistics by diversity category for the Fast Stream into one central table, similar to those presented for Fast Track Apprenticeship (FT), Summer Diversity Internship (SDIP) and Early Diversity Internship programmes (EDIP);
- removed breakdown by Fast Stream scheme to provide a greater focus on the bigger picture of the Fast Stream programme;
- improved the readership of the university breakdown and degree subject tables by grouping universities into known comparison groups, degree subjects into higher categories and schemes into clusters;
- edited titles to make table meanings clearer, where needed;

- added footnotes to provide further details and clarity, where needed.
- degree class is no longer a mandatory required field by applicants, therefore we no longer report analysis by degree class;
- under sexual orientation, grouped 'Other' with Lesbian, Gay and Bisexual (LGB) to have a new grouping classification of 'Lesbian, Bisexual, Gay and Other' (LGBO); and
- socio-economic measures based on parental occupation and free school meals are now the preferred methods of attributing socio-economic status by a number of government departments including the Cabinet Office, therefore we no longer report analysis by school type for the Fast Stream. Given the eligibility of the Fast Track programme, analysis by school type is presented along with other key socio-economic measures at this level.

Statistical disclosure control

The introduction of the General Data Protection Regulation (GDPR) has meant a review of our data practices and collections to ensure they are fit for purpose and that we appropriately present publications based on ethical, practical or legal considerations. Furthermore, the Government Statistical Service (GSS) and Government Social Research Service (GSR) approved guidance requires us to take reasonable steps to ensure that our published or disseminated statistics protects the confidentiality of individuals on our programmes.

Detailed analysis

Disclosure control refers to the methods that reduce the risk that confidential information is published. These methods are applied if ethical, practical or legal considerations require the data to be protected. Disclosure control involves modifying presented data so that the risk of identifying individuals is reduced, but at the same time attempts to find a balance between improving confidentiality protection and maintaining an acceptable level of quality and transparency in the published data.

The following disclosure control methodologies have been applied to the tables in this publication:

- aggregation of tables into higher summaries;
- primary suppression – counts of individuals less than 5 are not disclosed. Where this action has been taken, the reported data value has been recorded with an asterisk (*);
- secondary suppression – further suppression on other reported categories may be required where a primary suppression has taken place. In these instances, the primary suppressed value can be calculated or deduced from other data presented in the table. Note – secondary suppressed values are not strictly defined to counts of individuals less than 5. Where this action has been taken, the reported data value has been recorded with an asterisk (**);
- percentages related to suppressed counts of individuals are not disclosed. Where this action has been taken, the reported data point has been recorded with a dash (-) in-line with all other non-calculable percentages; and
- in some cases, 0 values can be revealing when tabulated with primary and secondary suppressed values, totals and other data presented in the table. In these instances, 0 values will be suppressed.

It should be noted, that groups or categories may not tally to totals where suppression has taken place.

Data true as of records held at 1 October 2018.

Feedback

We will be completing a review of the way we present, disclose and communicate data for future reports. Any comments or suggestions on the structure, presentation or usability of statistics in this report are greatly appreciated and will be helpful in driving future changes.

Please contact us with your feedback at:
fset.research_analysis@cabinetoffice.gov.uk.

Table 1: Headline Summary, Fast Stream Recruitment 2017

Notes:
 * The temporary fall in 2004 reflects the introduction of online self-assessment (if relevant), intended to discourage unrealistic applications. Since then, an application is deemed to have been submitted only if the applicant has completed the self-assessment and proceeds to take the online tests.

Notes:

* The temporary fall in 2004 reflects the introduction of online self-assessment (if relevant), intended to discourage unrealistic applications. Since then, an application is deemed to have been submitted only if the applicant has completed the self-assessment and proceeds to take the online tests.

"-" represents information that is unavailable as declaring the University of First Degree was a mandatory field in the application process in prior years but not required until the onboarding stage in 2017. Russell Group excluding Oxbridge and other universities is a new grouping classification introduced in 2017/18.

¹Breakdown of Non-Oxbridge into Russell Group and other universities. This is a new classification grouping that has been introduced in the 2017/18 report. Information for previous years is not available and has been noted with "-".
