I am responding to this enquiry because I am very concerned about the damaging effect that fracking would have on rural tourism in England, and also in the rest of the UK.

I live in near Bainton, which is in an area that is currently threatened by fracking (PEDL area SE95).

I visit North Yorkshire on holiday and for day trips and also leisure areas around Pocklington where I understand fracking is planned for also.

I am very concerned about the impact fracking would have on all rural tourist businesses.

Fracking is a heavy industrialised process unsuitable for the English countryside. For it to be economically viable gas companies need to build hundreds of well sites. Ineos quote on their tender document 30 well sites per 10km x 10km area.

Each PEDL licence has a 10km ‘zone of potential impact around it’. See Habitat Regulations Assessment of 14th Round Onshore Oil and Gas Licence Applications. Appendix E (gov.uk).

Widespread industrialisation of the countryside for shale gas production is incompatible with EFRA’s aim of developing sustainable rural tourism.

Fracking negatively impacts on homes/businesses near well-sites by:

- being allowed within 400m of homes, businesses and rural villages.
- 24-hour-a-day activities creating noise pollution
- visitors won’t want to spend their holidays in the shadow of a fracking well-site and will avoid fracking ‘blackspots’.
- businesses close to a well-site, such as campsites, B&Bs, pubs, hotels, etc. will suffer a fall in visitor numbers.
- farms which have diversified into tourist accommodation will be affected by traffic, noise, pollution

Fracking results in a huge increase in heavy traffic on country roads

- fracking wells require thousands of HGV movements to and from the site.
- fracking well-pads (sites) have between 10 and 40 wells, which means tens of thousands of HGV trucks per well-pad.
- trucks cause noise and air pollution, more queues, traffic accidents and damage to roads and verges.
- travelling around rural areas will be far more difficult for tourists.
- this will impact on rural businesses such as farms, shops and small factories, all of which rely on prompt deliveries for their businesses to function effectively.
- the peace and quiet of the countryside and rural villages will be destroyed.

Health impacts of fracking will deter tourists from visiting fracking areas

- fracking is banned or restricted by moratoria in many other countries (France, Germany, Bulgaria, Holland, Scotland) and in US states such as Maryland and New York State.
- these bans and moratoria are mainly because the health impacts of fracking on public health are considered to be too dangerous.
- Dr. Howard A. Zucker, NY State Health Commissioner, who recommended a fracking ban in his home state after a six-year study, said, “Would I let my family live in a community with fracking? The answer is no. The potential risks of fracking are too great. In fact, they are not even fully known.”

- new studies from John Hopkins University show that people living near fracking wells are 4x more likely to have asthma attacks and premature births.

- if fracking were allowed across the English countryside, many people would be discouraged from visiting because of health concerns for themselves and their families.

Fracking reduces employment in the rural tourism sector
- tourism provides millions of permanent jobs for the rural economy (over 3.1 million in 2013, according to Visit Britain).
- fracking would only provide a small number of short-term jobs at each well-site
- industry estimates of up to 64,000 jobs in 2024 from 4,000 fracking wells are dwarfed by the numbers of jobs in tourism threatened by fracking.
- most jobs on fracking well-sites would go to specialists brought in on fixed contracts, not local people.
- fracking in the USA has been shown to be a boom-and-bust industry and does not create long-term jobs.
- widespread fracking would threaten thousands of permanent jobs in the tourist industry, as visitor numbers would fall and businesses would close.

Fracking will affect the reputation of food produced in tourist areas.
- rural economies depend on farming and food production as well as tourism.
- many areas of the country are known for their high-quality produce and rely on this reputation to attract tourists to local food fairs, farmers’ markets, restaurants.
- the introduction of fracking in these areas may compromise the quality and reputation of locally produced food.
- The state of Victoria in Australia have recently banned fracking to protect their reputation of producing clean food

Fracking threatens nature and wildlife sites
- our nation’s protected areas, such as National Parks, Areas of Outstanding Natural Beauty (AONBs), Sites of Special Scientific Interest (SSSIs), World Heritage and Ramsar sites, etc. are hugely important for rural tourism and attract millions of visitors every year.
- there is currently no primary legislation banning fracking within these protected areas. Currently fracking in these areas is only restricted by planning conditions and government policy statements, not legislation.
- However, current legislation does allow fracking well-pads to be situated just outside the borders of these protected areas and wells can then be drilled horizontally underneath the protected areas.
- the resulting noise, pollution and traffic would destroy the amenity of the country’s most precious and wildlife-rich natural places.

Resulting in a dramatic fall in the number of tourists visiting the area.
Fracking will negatively impact wildlife tourism in the countryside.
- fracking will have a very damaging effect on wildlife populations, particularly if fracking wells are situated around the edges of protected areas like SSSIs.
- noise, air and light pollution and increased traffic from fracking well-sites will reduce the population of wild birds and animals, most of whom will leave the area completely.
- drilling and fracking at night would also have a detrimental effect on protected nocturnal species such as owls and bats.
- loss of wildlife will have a damaging effect on wildlife tourism in rural areas and a consequent drop in visitor numbers.

Water contamination
- fracking brings with it the threat of water contamination through leaking wells, which could contaminate the aquifers that provide our drinking water. 6% of fracked wells in the US leak.
- there may also be surface spills or other above-ground accidents, which could pollute streams, rivers and other water courses.
- fracking companies are not required to post a bond with local councils to pay for environmental clean-up, if indeed such clean-up were possible.
- one incident of contaminated drinking water, or a catastrophic explosion at a well-site, would permanently damage the reputation of a popular tourist area for many years.
- a water contamination incident would result in a drop in tourists visiting that area.

Fracking will reduce property prices, which will discourage rural investment.
- fracking has a negative effect on house, land and property prices, particularly for properties within one mile of a well-site.
- the DEFRA Shale Gas Rural Economy Report stated: "A study in Texas concluded that house prices valued at more than $250,000 and within 1,000 ft of a well-site saw their values decrease by 3-14%.
AND the same report went on to say: "House prices in close proximity to the drilling operations are likely to fall. There could be a 7% reduction in property values within one mile of an extraction site."
- a report in Mortgage Introducer magazine stated that properties near the only well that has ever been fracked, Preese Hall in Manchester, fell by 4%.
- this drop in property values will in turn will have a negative effect on rural business investment, as people will be reluctant to invest in new and existing rural businesses in areas where fracking is taking place.

Public perception of fracking is overwhelmingly negative.
- fracking is extremely unpopular with the general public, with only 21% of the population supporting the process, according to the latest Government Wave 18 survey.
- the government’s proposals to pay up to £10,000 to residents living near well have failed to convince the public, with only 33% supporting the policy.
- most people don’t like fracking, and are unlikely to want to go on holiday to an area where this industry is established.
- If a particular part of the countryside is known to be a fracking zone, this will discourage people from visiting this area, reducing tourist numbers.

Defra’s own report says that fracking would negatively impact the rural tourist sector.

- Defra’s draft Shale Gas Rural Economy Impacts Paper, which was eventually published unredacted in July 2015, states the following: “Shale gas may transform a previously pristine and quiet natural region, bringing increased industrialisation. As a result, rural economy businesses that rely on clean air, land, water and/or a tranquil environment may suffer losses from this change, such as agriculture, tourism, organic farming, hunting, fishing and outdoor recreation.”

- AND that fracking "may reduce the number of visitors and tourists to the rural area, with an associated reduction in spend in the local tourism economy."

- The first time this report was published it was redacted 63 times, including sections on house prices, economic impacts, social services, local services and the executive summary.

- The unredacted report was finally published in July 2015, only because the government was forced to do so by the Information Commissioner after a long-running public outcry.

- When it was finally published, Defra distanced itself from the report’s conclusions, claiming that it was an early draft of an internal document, was not analytically robust, and that work on this report had been discontinued.

- Many people wonder why the report was discontinued, instead of being re-drafted so that it was considered by Defra to be ‘analytically robust’ and suitable for publication. Was the effect of fracking on the rural economy not worthy of further examination?

- Defra has therefore never completed a comprehensive report on the effect of fracking on the rural economy – which of course would include the rural tourism sector, the subject of this enquiry. Is this perhaps because Defra knows that the results of such a report would be overwhelmingly negative?

Conclusion

Economically viable and therefore widespread fracking will have a damaging effect on tourism in rural areas, and farming jobs and I believe that the shale gas industry is one of the greatest threats facing rural tourism in England.

EFRA has a duty to oppose such developments within government, and should instead be working to promote sustainable, low-impact tourism in order to preserve the English countryside.

I recommend that the EFRA Select Committee should commission a new independent report of the impact of the shale gas industry on the rural economy, including rural tourism. Until such a report is produced, the EFRA Select Committee should demand an immediate moratorium on fracking and other forms of unconventional gas production.

September 2016
