

# Statistical Bulletin

## Abortion Statistics, England and Wales: 2006

This bulletin summarises information from the abortion notification forms returned to the Chief Medical Officers of England and Wales in respect of abortions carried out in England and Wales in 2006.

### KEY FACTS

In 2006, for women resident in England and Wales:

- the total number of abortions was 193,700, compared with 186,400 in 2005, a rise of 3.9%
- the age-standardised abortion rate was 18.3 per 1,000 resident women aged 15-44, compared with 17.8 in 2005
- the abortion rate was highest at 35 per 1,000, for women age 19.
- the under-16 abortion rate was 3.9 and the under-18 rate was 18.2 per 1,000 women, both higher than in 2005
- 87% of abortions were funded by the NHS; of these, just over half (55%) took place in the independent sector under NHS contract
- 89% of abortions were carried out at under 13 weeks gestation; 68% were at under 10 weeks
- medical abortions accounted for 30% of the total compared with 24% in 2005
- 2,000 abortions (1%) were under ground E, risk that the child would be born handicapped

Non-residents:

- in 2006 there were 7,400 abortions for non-residents carried out in hospitals and clinics in England and Wales (7,900 in 2005)

## 1. Introduction

1.1 This is the fifth Statistical Bulletin presenting statistics of legally induced abortions in England and Wales and covers those that took place in 2006. The format of the tables presented in this bulletin reflects the recommendations made in the ONS disclosure review (see Section 5 for further information).

1.2 The first bulletin, published by the Department of Health in October 2003, covered abortions in 2002 and was revised to incorporate the final 2002 figures in July 2004 in an Internet-only publication. Statistics for 2003 were first published in August 2004 and more detail was published in July 2005 on the Internet at the same time as statistics for 2004 were published. Statistics for 2005 were published in July 2006. Statistics for earlier years were published by the Office for National Statistics – *Abortion Statistics*, Series AB nos. 1 to 28.

1.3 The information collected on the abortion notification form (HSA4) was amended during 2002. Details of the changes are in appendix A.

## Data quality

2.1 Incomplete and incorrectly completed forms are returned to practitioners for completion and clarification. In a very small number of cases (about one-quarter of one percent), the information remains unavailable at the time of publication. Date of birth was missing from 30 records in 2006, gestation information from 129, postcodes from 50 and grounds from 74.

2.2 Records with missing ages were assigned to the 20-24 age group. Missing gestations were imputed as 7, 8, 9 or 10 weeks in equal distribution unless method of abortion or diagnosis suggested otherwise. Missing postcodes were imputed with a random postcode from within the main PCTs of other residents attending the same hospital or clinic. Missing grounds were imputed as ground C (see Section 4.2.1).

2.3 Abortion rates per 1,000 women for 2006 at a national level and at PCT level are calculated using 2005 mid-year population estimates for England, Wales, England & Wales, Primary Care Organisations and Local Health Boards.

**Figure 1 Age-standardised abortion rate per 1,000 population aged 15-44, England and Wales, 1970 to 2006**

Rate

### 3. Overview

3.1 In total there were 201,173 abortions notified as taking place in England and Wales in 2006.

3.2 There were 193,737 abortions to residents of England and Wales in 2006. This represents a rate 18.3 per 1,000 resident women aged 15-44 (age-standardised rate, see Abortion Statistics, Series AB no. 27 page vi). The age-standardised abortion rate peaked at 15.5 in 1990 but remained below 15 until 1995; it then rose to 17.2 in 1998. From 1999 to 2002 the rate remained level at just over 17, the rate then rose again and in 2006 it was 18.3 (see *Figure 1* and Table 1).

3.3 In 2006 there were 7,436 abortions to residents of other countries, principally Northern Ireland (17%) and the Irish Republic (68%). This is about 500 fewer than in 2005. The number of abortions to non-residents remained between 9,000 and 10,000 in the period 1995 to 2003. The 2006 total is the lowest in any year since 1969 (see Table 1 and Table 12).

### 4. Analysis and commentary (England and Wales residents only)

#### 4.1 Location and funding of abortions

4.1.1 Except in an emergency, any treatment for the termination of pregnancy can only be carried out in an NHS hospital or in a place approved for the purpose by the Secretary of State, and after 24 weeks, only in an NHS hospital. Through contractual arrangements with Primary Care Organisations (PCOs), some approved independent sector places perform NHS-funded abortions.

4.1.2 Table 3i and *Figure 2* show that in 2006, 39% of abortions were performed in NHS hospitals and 48% in approved independent sector places under NHS contract (NHS Agency), making a total of 87% of abortions funded by the NHS. The remaining 13% were privately funded. The proportion performed under NHS contract has been rising steadily since 1992 while the proportions of NHS hospital and private abortions has been falling.

**Figure 2 Abortions by purchaser, England and Wales, 1996 to 2006**

## 4.2 Statutory grounds for abortion

4.2.1 A legally induced abortion must be certified by two registered medical practitioners as justified under one or more of the following grounds:

- A the continuance of the pregnancy would involve risk to the life of the pregnant woman greater than if the pregnancy were terminated (Abortion Act, 1967 as amended, section 1(1)(c))
- B the termination is necessary to prevent grave permanent injury to the physical or mental health of the pregnant woman (section 1(1)(b))
- C the pregnancy has not exceeded its twenty-fourth week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of the pregnant woman (section 1(1)(a))
- D the pregnancy has not exceeded its twenty-fourth week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of any existing children of the family of the pregnant woman (section 1(1)(a))
- E there is a substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped (section 1(1)(d))

or in an emergency, certified by the operating practitioner as immediately necessary:

- F to save the life of the pregnant woman (section 1(4))
- G to prevent grave permanent injury to the physical or mental health of the pregnant woman (section 1(4))

4.2.2 In 2006, the vast majority (97%) of abortions were undertaken under ground C and a further 1% under ground D. Grounds A and B together accounted for about 1% of abortions, and a similar proportion were under ground E. The proportion of ground C abortions has risen steadily since 1996, with a corresponding reduction in ground D cases. (See Table 3*ii*.) Less than half a per cent of ground C only terminations were reported as being performed because of a risk to the woman's physical health. Abortions are rarely performed under grounds F or G.

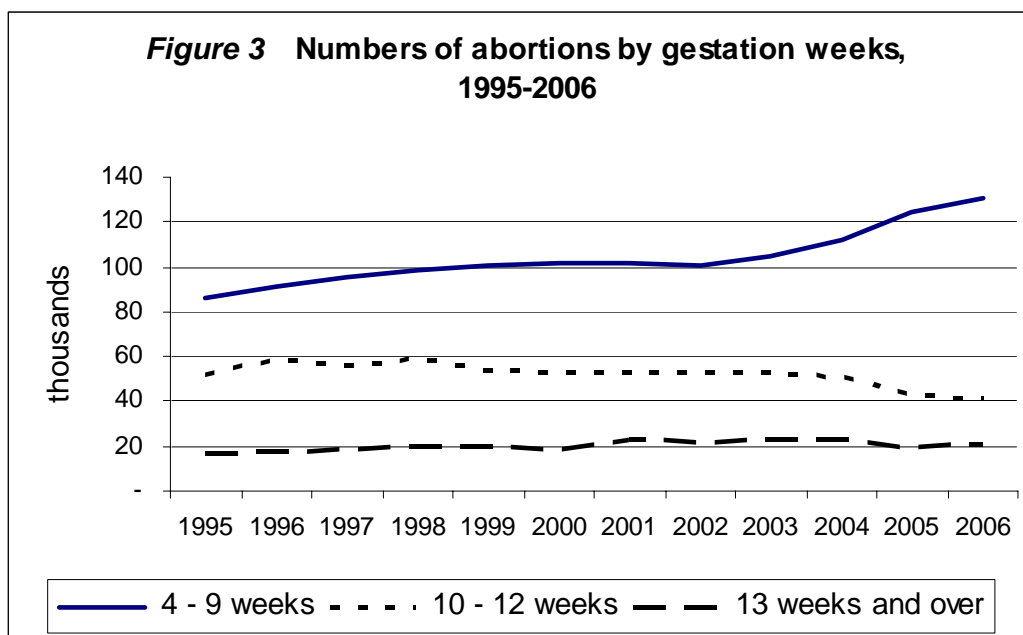

4.2.3 Chromosomal abnormalities were reported for about a third (38%) of cases under ground E, congenital malformations in about 47%. The most commonly reported anomalies were of the nervous system (25% of all ground E cases) and the musculoskeletal system (7%); Down's syndrome (21% of all ground E cases) was the most commonly reported chromosomal abnormality (Table 9; specific groups are shown only where there are 10 or more cases in total. See Section 5).

4.2.4 As in 2005, and each year since 1999, fewer than 10 abortions under ground E in 2006 were associated with rubella.

## 4.3 Gestation period

4.3.1 The vast majority of abortions are performed at under 13 weeks gestation. In 2006, about 68% were at under 10 weeks and a further 22% at 10-12 weeks. The proportion at 13 weeks or more was 11% in 2006. The corresponding percentages for 2005 were 67%, 23% and 10% respectively showing a continuing increase in the proportion of abortions that were performed under 10 weeks (Table 3 *iii* and Figure 3).

4.3.2 Department of Health policy is that women, who are legally entitled to an abortion, should have access to the procedure as soon as possible. Evidence shows that the risk of complications

increases the later the gestation. In 2001, the Government set a standard of a maximum waiting time of 3 weeks and since 2002/03 it has invested £8 million to improve early access to abortion services. PCOs' performance in this area is also being measured as part of their NHS performance ratings. The latest data for 2006 show that progress continues to made to increase early access: 65% of NHS funded abortions took place at under 10 weeks – compared with 51% in 2002. This represents a 22 % increase in total number of abortions taking place at under 10 weeks between 2002 and 2006 compared with a 9% rise in the total number of abortions over the same period. See Table A.

Year	%
2002	51
2003	52
2004	56
2005	63
2006	65

4.3.3 Abortions where gestation has exceeded its twenty-fourth week account for less than 0.1% of the total. There were 136 such abortions in 2006 (Table 5).

#### 4.4 Age

4.4.1 The abortion rate in 2006 was highest at 35 per 1,000, for women age 19. There were just over 1,000 abortions to women aged under 15 and about 650 to women aged 45 or over (see Table 4a, Table 10b and Figure 4).

4.4.2 The under-16 abortion rate was 3.9 in 2006 compared with 3.7 in 2005 and the under-18 rate was 18.2 in 2006 compared to 17.8 in 2005. The rates for all age groups in 2006 were higher than in 2005, most markedly for the under 18 age groups (Table 4).

#### 4.5 Marital status

4.5.1 80% of abortions in 2006 were carried out for single women, a proportion that has risen slowly from about two thirds since 1995 (Table 3v).

#### 4.6 Ethnicity

4.6.1 The revised HSA4 forms introduced in 2002 allow for the recording of

**Figure 4 Abortion rate per 1,000 population by single year of age, England and Wales, 2006**

ethnicity, as self-reported by the women involved; this information was not previously recorded. Ethnicity was recorded on 86% of the forms received for 2006. Of women whose ethnicity was recorded, 75% were reported as White, 12% as Black or Black British and 8% as Asian or Asian British (Table 3vi).

4.6.2 The percentage of previous abortions (where the woman has had one or more previous abortion in addition to the one recorded for 2006) varies by ethnic group. 28% of Asian women having abortions in 2006 had had a previous abortion compared with 44% of Black women (See Table B).

Asian or Asian British	28%
Black or Black British	44%
Chinese or Other ethnic group	32%
Mixed	37%
White	31%

#### 4.7 Previous abortions

4.7.1 As in 2005, 32% of women undergoing abortions in 2006 had one or more previous abortions. The proportion has risen from about 28% since 1996. (Table 3ix and Table 11).

4.7.2 In 2006, 23% of women aged under 25 having an abortion, had had a previous abortion. (Table 11) Repeat unintended pregnancy and subsequent abortion is a complex issue associated with increased age as it allows longer time for exposure to pregnancy risks.

#### 4.8 Previous obstetric history

4.8.1 In 2006, about 47% of women undergoing abortions had one or more previous pregnancies that resulted in a live or stillbirth, a proportion virtually unchanged over the last 10 years. About 14% of women had a previous pregnancy resulting in a miscarriage or ectopic pregnancy (Tables 3vii & 3viii).

#### 4.9 Method of abortion

4.9.1 Different methods may be used to terminate a pregnancy, depending on the

duration of gestation and other circumstances relating to the individual woman. There is one principal medical method, involving the use of the abortifacient drug Mifegyne (mifepristone, also known as RU486). The main surgical methods are vacuum aspiration, recommended at up to 15 weeks gestation, and dilatation and evacuation (D&E) recommended where gestation is greater than 15 weeks. D&E may be used in combination with vacuum aspiration; such cases are recorded in the statistics as D&E.

4.9.2 Medical abortions accounted for about 30% of the total in 2006. The proportion of medical abortions has more than doubled in the last five years. There has been a continuing upward trend in medical abortions since 1991 when Mifegyne was licensed for use in the UK (Table 3iv and Table 5).

4.9.3 Vacuum aspiration was used in for 64% of abortions in 2006 and Dilatation and Evacuation (D&E) alone in about 6% (Table 3iv).

4.9.4 For abortions at 22 weeks or beyond, feticide is recommended prior to the evacuation of the uterus to stop the fetal heart. In 2006, 65% of abortions performed at 22 weeks and over were reported as preceded by a feticide and 28% were performed by a method whereby the fetal heart is stopped as part of the procedure. Of the remaining 6%, at the time of publication, we had not been able to confirm whether feticide had been performed for the majority of cases.

#### 4.10 Length of stay

4.10.1 In 2006, 999 (0.5%) women were reported as having a duration of stay of one or more nights. Over half of these stays were for abortions performed at later gestations – 20 weeks and over (See Table C).

Table C  
Percentage of abortions requiring a duration of stay of one or more nights, by gestation, 2006

Gestation weeks	(100%)
under 10	20%
10 -12	16%
13-19	8%
20 and over	56%

#### 4.11 Complications

4.11.1 Complications were reported in about 370 cases in 2006, a rate of about 2 in every thousand abortions slightly lower than in 2004 and 2005 (Table 8).

#### 4.12 Selective terminations.

4.12.1 In 2006 there were 64 abortions which were selective terminations. In 38 cases, 2 fetuses were reduced to 1 fetus and in 14 cases 3 fetuses were reduced to 2 fetuses.

4.12.2 In 2006, more than half (55%) of the selective terminations were performed under grounds E.

#### 4.13 Chlamydia screening

4.13.1 Screening for chlamydia is a key component of the Department of Health's Sexual Health and HIV Strategy. Analysis of returned data for 2006 shows that 73% of women aged under 25 having abortions in 2006 were offered chlamydia screening. This is little different to the proportion of all women screened which in 2006 was 73%.

#### 4.14 Place of residence

4.14.1 Following the abolition of the English Health Authorities in April 2002, the place of residence details provided on the HSA4 form are allocated for analysis to Primary Care Organisations. For Wales, place of residence is allocated to their equivalents, Local Health Boards.

4.14.2 There were boundary changes for PCTs from 1st October 2006 with the number of PCTs reduced from 303 to 152.

## **5. Recommendations from the National Statistics Disclosure Review**

In using and releasing health statistics there is a risk, generally with small numbers, of identifying individuals. To address this, the Department of Health asked the National Statistician to provide it with guidelines for interpreting the National Statistics Code of Practice and associated protocols in the handling of health statistics across the health community, in a way that balances data confidentiality risks with the public interest in the use of the figures. The Office for National Statistics (ONS) published a report on disclosure guidance for abortion statistics in July 2005 and a further report giving guidance for all health statistics was published in 2006. The report for abortions statistics can be found on the ONS website at:

<http://www.statistics.gov.uk/statbase/Product.asp?vlnk=11988>

The key recommendations can be found in Appendix B.

The 2006 Abortion Statistics bulletin applies the conclusions of the ONS disclosure review and guidance for abortion statistics. The guidance provides details on how to identify cells within tabulated statistics where the risks of a breach of confidentiality are unacceptable ("unsafe cells"). It then describes methods for reducing these risks.

For the bulletin, the risks identified have been reduced largely by redesigning tables. However, where table redesign proved to be impossible then suppression was applied to cells with fewer than 5 cases at National level or fewer than 10 cases at sub-national level and for highly sensitive variables such as gestation weeks by medical grounds. The same principles were also applied to tables showing rates and percentages.

In 2005, 3 year aggregate figures for 2003-2005 for some of the areas whose data are suppressed each year due to small numbers were published.

Further 3 year aggregate tables are planned for publication in 2009 for the years 2006-2008.

## **6. Editorial Notes**

Percentages are subject to rounding and totals may not agree with the sum of the component figures shown. Rates are also rounded.

The following symbols are used in the tables:

- . = not applicable
- .. = suppressed values

Z80-Z84	family history of heritable disorder	121	..
	other *	18	..

<sup>1</sup> ICD-10 codes are taken from the International Statistical Classification of Diseases and Related Health Problems (Tenth Revision) published by the World Health Organisation (WHO)  
Specific groups shown only where there are 10 or more cases in total or where a presented figure would reveal a suppressed value.

<sup>2</sup> Codes listed under 'other' have cases between 0 and 9 inclusive

<sup>3</sup> Over 24 week total includes abortions carried out under grounds A, B, F or G.

.. Fewer than 10 cases (0-9)

\* Includes cases where insufficient detail was available to allocate an ICD10 code.

## Appendix A

Changes introduced with the new abortion notification form, following a consultation exercise undertaken in 2000, are shown in the table below. A blank entry in the right hand column indicates an item that remains unchanged.

Notification form 1991-2002	Notification form 2002 onwards – changes to items
-----------------------------	---

Name and address of operating practitioner and certifying practitioner(s)	
---	--

### Patient details

Name	Revised: Hospital/clinic number or name
Address	Revised: Postcode or complete address
Date of birth	
Marital status	<i>Single</i> expanded further with sub-category “ <i>single not stated</i> ” added in 2003
Parity (previous live births, stillbirths, spontaneous miscarriages, legal terminations)	<i>previous live births, stillbirths</i> replaced by previous pregnancies resulting in live birth(s) or stillbirth(s); ectopic pregnancies included with miscarriages
	New item: ethnicity, using 2001 Census categories

### Treatment details

Name and address of place of termination	
Whether patient was an NHS case terminated in an approved place under an agency agreement	Revised: whether NHS or privately funded
Gestation period and method of estimation	Revised: method of estimation no longer collected
Statutory grounds for terminating pregnancy	
Medical condition of woman or diagnosis or suspected medical condition of fetus	
Date of admission to place of termination	
Date of termination	
Date of discharge from place of termination	
Method of termination	Feticide now separately identified
Whether selective termination of a multiple pregnancy	
Whether sterilisation performed	No longer collected
Complications prior to notification	Changed: complications prior to discharge
In case of death, date and cause	
	New item: whether chlamydia screening offered

## ***Appendix B***

### **Key recommendations from the National Statistics Disclosure Review**

Recommendation 1: Within a release of abortion statistics unsafe cells are defined as being counts of abortions that are:

- zero unless no other value is logically possible
- less than 5 for Government Office Region in England, the country of Wales or any larger geography
- less than 10 for any geography below the Government Office Region in England or the country of Wales
- less than 10 for highly sensitive variables
- associated with either 1 or 2 practitioners
- associated with either 1 or 2 hospitals

The variables that are considered highly sensitive are:

- Young ages (<15)
- Late gestation (over 24 weeks)
- Procedure by gestation
- Medical conditions

Recommendation 2: Simple calculations such as rates or percentages do not necessarily make an unsafe cell safe and should not be used to protect data unless it can be demonstrated that one cannot work back to the original count. In order to keep statistical disclosure control rules clear and consistent for abortion statistics rates or percentages should only be calculated from safe cells.

Recommendation 3: In order to ensure that unsafe cells in the abortion statistics are disguised table design should be used as a preliminary protection method. Redesign should be implemented taking into account the information required by the main users of the data.

Recommendation 4: Statistics should only be constructed using area of residence rather than place of termination thus reducing the risk of disclosure from counts of events that are associated with 1 or 2 practitioners/hospitals.

Recommendation 5: If unsafe cells exist in tables after redesign these should be removed using suppression methods (primary and secondary).

Recommendation 6: In order to avoid resource intensive analysis of disclosure by differencing the abortions data should not in general be published on geographies that are non-coterminous with SHA/region/PCO/LHB or for non-standard variable categories.

Recommendation 7: In order to release more detail some data should be published aggregated over a number of years. To keep the methods for disclosure control clear, consistent and easy to implement the recommendation is made that rolling aggregates are not produced but years are aggregated independently.

Recommendation 8: The guidelines should be implemented for all published outputs of abortion data e.g. in cases where the data published can be used to make direct inferences about abortions. The guidelines should be implemented as soon as possible. The DH and ONS should work together in order to implement these guidelines for the annual bulletin release for 2003 and 2004.

Recommendation 9: Users should be made aware of what constitutes an unsafe cell within the abortion statistics. The user should also be told that the method used to protect the table is predominantly table redesign used to minimise the number of unsafe cells that require suppression. The impact on the quality of the data will be that in some cases less detail will be displayed and suppressions will mean that some information is removed from the table.
